education

Cornell University, Ithaca, NY
B.S. in Computer Science, GPA: 4.15/4.00 — Aug 2018 – May 2022

relevant coursework († = teaching assistant)

CS 6670: Computer Vision, CS 4780: Machine Learning†, CS 4120: Compilers, CS 4820: Algorithms†, CS 5414: Distributed Systems, CS 4410: Operating Systems, MATH 4130: Analysis I (Honors), CS 4850: Mathematical Foundations, MATH 2940: Linear Algebra, BTRY 3080: Probability & Inference, CS 3110: Functional Programming, CS 3410: Systems Programming

experience

Yext, New York, NY
Software Engineering Intern — May 2020 – Aug 2020

- Working on all-things security, including static code analysis over the entire codebase

Cornell University Vision and Learning, Ithaca, NY
Undergraduate Researcher — Sept 2019 – present

- Working on learning over sets and graphs for relational reasoning

Morgan Stanley, New York, NY
Technology Summer Analyst — June 2019 – Aug 2019

- Architected and implemented end-to-end data pipeline to process and analyze over 800,000,000 entries of financial data daily with highly optimized, parallelized Python scripts, using NumPy and Pands
- Reduced mainframe consumption by 90%, from 5000 to 500 CPU-seconds, saving tens of millions of dollars in annual costs
- Created and deployed firm-wide DevOps web tool to analyze large text-based datasets

Cornell Unmanned Air Systems, Ithaca, NY
Vision Lead — Oct 2018 – present

- Designed and implemented custom object detection and classification model (Mask R-CNN variant with multi-head output) in multi-task learning setting on collected aerial imagery dataset, in PyTorch
- Lead all computer vision tasks on team, with individual efforts directly increasing classification task accuracy by 32% and object detection mAP IoU by over 80%

Data Science for India
Instructor & Curriculum Developer — July 2017 – Oct 2017

- Developed introductory data science course for over 400 students of 11 Jupyter notebooks to manipulate, visualize, and analyze useful data from large datasets using NumPy, pandas, and matplotlib

preprints & publications

Better Set Representations For Relational Reasoning (ICML 2020 OOL Workshop)
Qian Huang, Horace He, Abhay Singh, Yan Zhang, Ser-Nam Lim, and *Austin Benson*

projects

Few-Shot Clustering Instance Segmentation (FS-CIS) Net

- Designed novel neural network architecture to perform proposal-free few-shot instance segmentation, showcasing results in graduate-level course, CS 6670: Computer Vision
- Validated approach on PASCAL-5i dataset, showing comparable performance to Mask R-CNN inspired methods with significant speedups

Xi Compiler

- Wrote optimized compiler in Scala for language Xi, in team of 4, approximately 10,000 lines of code
- Includes lexing, parsing, type-checking, generating intermediate code, various optimizations including dataflow analysis, and emitting assembly instructions with non-trivial register allocation

CamelTrouble

- Created real-time multiplayer browser game in OCaml, transpiled to JavaScript, in team of 3
- Implemented procedural map generator that randomly creates valid maps to play on
- Programmed user events and class abstractions: unifying model, controller, and view in MVC design

Virtual Stock Market

- Deployed RESTful web app in Python using Flask that simulates stock market trading with live prices and paper money, storing transactions with SQL database

languages & technologies

Python, Java, OCaml, Scala, Go, C/C++, Bash, JavaScript, HTML/CSS, SQL
PyTorch, Keras/TensorFlow, Git, Gradle, Flask, Docker
