

education	Cornell University , Ithaca, NY M.S. in Computer Science B.S. in Computer Science (Honors), <i>Summa Cum Laude</i> , GPA: 4.14/4.30	Aug 2021 – May 2023 Aug 2018 – May 2021
coursework	CS 6241: Data Science Numerics ECE 6970: Statistical Distances CS 6670: Computer Vision † = head teaching ORIE 6510: Probability CS 4780: Machine Learning † CS 4820: Algorithms † assistant MATH 4130: Analysis I (Honors) MATH 4315: Linear Algebra CS 4850: Math Foundations	
preprints & publications	Edge Proposal Sets for Link Prediction   (under submission) <i>Abhay Singh, Qian Huang, Sijia Linda Huang, Omkar Bhalerao, Horace He, Ser-Nam Lim, Austin Benson</i> Combining Label Propagation and Simple Models Out-performs GNNs   (ICLR 2021) <i>Qian Huang, Horace He, Abhay Singh, Ser-Nam Lim, Austin Benson</i> Better Set Representations For Relational Reasoning   (NeurIPS 2020) <i>Qian Huang, Horace He, Abhay Singh, Yan Zhang, Ser-Nam Lim, Austin Benson</i>	
professional experience	Citadel, Global Quantitative Strategies , Chicago, IL <i>Incoming Quantitative Research Intern, Portfolio Optimization Team</i> Citadel, Global Quantitative Strategies , Chicago, IL <i>Software Engineering Intern, Portfolio Optimization Team</i> <ul style="list-style-type: none">• Deployed statistical monitoring tool to assess data quality and detect anomalies in a variety of inputs used in formulated portfolio optimization problem• Built framework to efficiently study a large collection of optimization problems, used by researchers to improve solution robustness and latency in portfolio optimization Yext , New York, NY <i>Software Engineering Intern</i> <ul style="list-style-type: none">• Designed and integrated static code analysis tool used firm-wide on over 80% of codebase to scan vulnerable Java code at compile-time• Wrote multi-threaded Golang script to determine unprotected customer apps that downloads and parses terabytes of API log data on-the-fly via AWS S3, and makes remote-procedure calls to fetch app data by API key; improved performance by 8x relative to previous solution• Integrated webhooks to automate modification of company repository permissions using Github's REST API, notifying teams automatically via Slack and email Morgan Stanley , New York, NY <i>Technology Summer Analyst</i> <ul style="list-style-type: none">• Architected and implemented end-to-end data pipeline to process and analyze over 800,000,000 entries of financial data daily with highly optimized, parallelized Python scripts, using NumPy and Pandas• Reduced mainframe consumption by 90%, from 5000 to 500 CPU-seconds, saving tens of millions of dollars in annual costs• Created and deployed firm-wide DevOps web tool to analyze large text-based datasets	June 2022 – Aug 2022 June 2021 – Aug 2021 May 2020 – Aug 2020 June 2019 – Aug 2019
projects	1-Lipschitz Deep Equilibrium Models  <ul style="list-style-type: none">• Presented method to enforce uniqueness and existence of a fixed point solution in a neural network representing an iterative solver, which is done by constraining 1-Lipschitzness of the model Few-Shot Clustering Instance Segmentation (FS-CIS) Net  <ul style="list-style-type: none">• Designed novel model architecture to perform proposal-free few-shot instance segmentation in autonomous driving scenarios, speeding up inference with comparable performance to existing methods Continual Learning with Lottery Tickets  <ul style="list-style-type: none">• Proposed and demonstrated effectiveness of novel training scheme to resist catastrophic forgetting, a phenomena in which a model overfits to the most recently seen data in a multi-task learning setting Xi Compiler <ul style="list-style-type: none">• Wrote optimized compiler in Scala for language Xi, in team of 4; approximately 10,000 lines of code• Includes lexing, parsing, type-checking, intermediate code generation, various optimizations including dataflow analysis, and emitting assembly instructions with non-trivial register allocation	
languages & technologies	Python, Java, OCaml, Scala, Go, Julia, C/C++, Bash, JavaScript, SQL PyTorch, Keras/TensorFlow, Git, Jupyter, Docker, Bazel, Gradle, Terraform
